## ACTIVATION OF STRATIFICATION STRATEGIES AND RESULTS OF THE INTERVENTIONS ON FRAIL PATIENTS OF HEALTHCARE SERVICES

Activation of Stratification Strategies and Results of the Interventions on Frail Patients of Healthcare Services (ASSEHS) project is an international effort to bring together Professionals from Health Services, Academia and Research Centers from European countries to study current existing risk stratification strategies and tools and the challenges to spread their use and the application on Frail elderly Patients.

The work leading to these results has received funding from the European Commission's Health Programme under Agreement Number 20131204.

## BACKGROUND

Care of frail older people with complex conditions will improve only with deliberate intent and planning, requiring European Health Systems to move towards proactive, anticipatory and integrated care.

Population management is emphasized through the use of tools to stratify people with chronic diseases according to their risk and offering support commensurate with this risk.

Effective screening of frailty is key in optimizing care for frail population. Stratification tools identify complex frail and high risk patients and maintain these patients on the radar of the Health Services.

However, a Health System is an intricate network of health care structures with multiple levels of governance. Using extensive screening methods is challenging due to the fact that each particular organization has specific structures, professional roles and governance schemes.

## CONCEPT

APPRAISAL STANDARD for RISK STRATIFICATION TOOLS

FEASIBILITY of INTRODUCING TOOLS in HEALTH SERVICES

IMPACT of INTRODUCING TOOLS in HEALTH SERVICES

WHITE BOOK on INTERVENTIONS on FRAIL PATIENTS

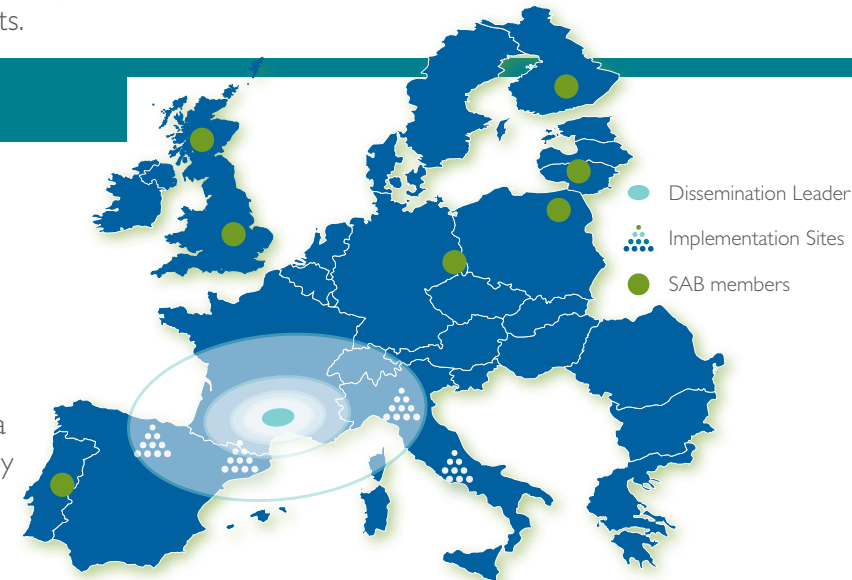

ASSEHS focuses on tools, feasibility and impact of their introduction in Health Services and on the results of Interventions on Frail patients.

## DISSEMINATION

ASSEHS will work on 4 implementation sites:

- Lombardy
- Puglia
- Catalonia
- Basque Country

ASSEHS will also benefit from the advice from a Stakeholder Advisory Board (SAB) composed by 7 European experts on health policy, medicine, chronic care, bioethics and research.

## ACTIVATE!

Become an affiliate member to **ASSEHS** to learn from 4 innovative European regions on population risk management.
